DETAILED ACTION

Non Final Rejection

- 1). The applicant's responses in Paper No. 17 is acknowledged and this Office action is a further action on the merits.
- 2). The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

3). Claims 1 to 3, 9 to 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Carruth (U.S. 4,904,443) in view of Toshiba (JO 2168195).

The primary reference discloses a BWR arrangement comprising, a plurality of fuel assemblies (items 21-24), plurality of control rod guide apertures / tubes (items 50) accommodating a plurality of control rods (items 40), a flat core plate (item 62) supported in the conventional General Electric BWR design (see Figures 2A,B), a plurality of fuel assembly support structures (items 28, Figure 3) extending through the said core plate, a coolant flow inlet, a coolant flow outlet, with the said inlets and outlets off-set with parallel center-lines and the coolant flow outlet sized to receive the said fuel assemblies as shown in Figure 2A, relating to claims 2, 10, the said control apertures / tubes are arranged in a cruciform shape (see Figure 3, item 50, relating to claims 3, 11, the reference discloses coolant orifices (see for example, items 66).

The primary reference discloses the claimed apparatus except for specifically disclosing core plate supports / beams. The secondary reference discloses core plate supports. It would have been obvious to one of ordinary skill in the nuclear fuel art at the time of the invention to have incorporated the Toshiba items 5 (Figure 5) core plate supports to provide support to the core plate of Carruth item 62, as this is conventional practice for BWR nuclear reactor designs.

but would be allowable if rewritten in independent form including all of the limitations of

the base claim and any intervening claims.

5). The prior art made of record and not relied upon is considered pertinent to

applicant's disclosure.
